

Afrofurn focuses on the shades and hues created by the array of Aluminium (or other metal type) slats that have been crafted together to create effect. A choice of colours in the range of Powder Coated and Anodized finishes, lends itself to a silky touch with dazzling shimmers of light. There is timeless elegance in every design.

Swatch chart of colours. Each colour can be Matt or Gloss finished with varying shades of each. An example is Deep Red to light pink. Please check our technical brochures for more information on colour choice.

Powder Coating is our standard finish. Anodizing is our preferred finish. Anodizing is an electro-chemical process used to increase the thickness and density of the surface of aluminium parts. Anodizing changes the microscopic texture of the surface and can change the crystal structure of the metal near the surface. This makes it very resistant to scratches, abrasion, weathering, and corrosion. Additional sealing enhances UV protection. It is vital to ensure a thorough anodizing process is completed.
